

功率定义 Ratings definitions

数据中心功率 Data Centre Power (DCP)

在无限制运行时间的条件下，发电机组能够为变化的电力负载供应的最大功率。
Power (DCP) is the maximum power that a variable electric load may operate for an unlimited number of hours per year.

备用功率 Standby Power (ESP)

在规定的维修间隔和规定的维护保养条件下，发电机组在电网出现故障或异常的情况下，每年运行达 200 小时，能够为变化的电力负载供应的最大功率，
delivered while supplying a variable electrical load. A DCP-rated engine may operate for an unlimited number of hours per year.

1) 所有功率符合ISO 8528-1, ISO 3046和DIN 6271标准，在主要输出功率下，with operating conditions specified in ISO 8528-1.

2) 此发动机信息为标准配置的发动机信息。详细信息请参考数据单。部门获取 Engine datasheet contains information only. For performance specifications in detail please refer to Application Engineering Department.
